

**How is your Internet used?
Would you like to know more?
Would you like to control Internet
activity?**

Is your staff playing around on the web?
Are there times that your web access crawls?
Is email clogging up your Internet connection?
Is Internet radio or streaming video interfering
with daily work?

**Three simple steps to more efficient
network usage.**

Step 1: Monitoring — “See More”

Closely watch the employees, equipment, and applications that use your network to identify trouble spots, and who or what may be abusing your resources. See at a glance if critical applications are constrained, who the greedy users are, if there are any rogue users, and whether you are actually receiving, and using, all the bandwidth you've contracted for.

Step 2: Reporting — “Know More”

Once you have monitored what's taking place, generate detailed, easy-to-read reports by user, group, or application — displaying network usage. In addition, diagnostic tools give you information on network downtime, bandwidth allocation, and more.

Step 3: Shaping — “Do More”

TSG Composer lets you easily take action on the information gathered above. Optimize network performance by prioritizing and allocating bandwidth to the applications and individuals who need it most and by limiting access to greedy applications and excessive users.

TSG Network Composer Powered by Cymphonix, allows you to:

- Enhance network performance by prioritizing critical applications
- Improve employee productivity by reducing distractions
- Provide liability oversight against inappropriate Internet content
- Easily view and manage traffic through an elegant Web interface
- Save money by getting the most out of your existing bandwidth
- Control who and what can be accessed on the Internet.
- Find and block Spyware programs that are stealing your bandwidth
- Manage traffic with layer 7 identification, rules, and priorities
- Understand your network with graphical reports

TSG has a low cost program to help you regain control of your companies Internet access.

Remember how great it was to get an Internet connection, now it needs to be kept under control.

TSG will monitor, recommend and implement Internet policy functions.

Receive email notices and reports on your company's Internet usage, right down to the individual.
