

New Edge Networks Partners with TSG (The Selah Group)

TSG (The Selah Group) to offer Broadband Services to Clients and Resellers.

Mesa, AZ. — (July 29, 2005) — TSG, a systems integrator of UNIX based solutions, has reached a partner agreement with New Edge Networks to provide broadband access services to help SCO Resellers.

Wide Area Networking products will including Managed Network Services, VPN, Private Network, Managed VPN, Frame Relay, Frame over DSL Services, ATM and Private Line as well as dedicated Internet access solutions that can scale with your business as it grows. TransEdge Interent Access products will include: TransEdge DSL, TransEdge T1, DS3, OCx and Ethernet. These broadband access services are powered by New Edge Networks, a Vancouver, Wash. national provider of secure multi-site managed data networks and dedicated Internet access for businesses and communication carriers

“Broadband access has become a necessity in today’s business environment,” said George Fulop, President of TSG. Small or midsize-business customers that are using dial-up solutions now can step up to broadband access at price points well below T-1,” Mr. Fulop said. “Large-business customers with T-1 connections and multi-site networks can step down to less expensive alternatives that meet their bandwidth and quality-of-service requirements. Many of our clients have multiple locations that require network connectivity to improve management of remote warehouses and sales offices”

Greg Griffiths, vice president of marketing for New Edge Networks said, “Strong partnership affiliations, such as the one we now have with The Selah Group are important for tapping the growing broadband. No one could get as close to customers as providers with hands and feet on the street.”

In addition to offering multi-site managed data networks and internet access solutions, The Selah Group also provides disaster recover software and hardware solutions for clients and resellers across the country.

About New Edge Networks

New Edge Networks is a national provider of private multi-location broadband networks for business and carrier customers. Through its network facilities, New Edge Networks uses a variety of last-mile broadband access technologies (DSL, frame relay, ATM, cable, and satellite) for building wide area networks (WANs) or virtual private networks (VPNs) that reach 100 percent of U. S. business locations. New Edge Networks' product suite of managed WAN and VPN services received Frost & Sullivan's Telecommunications Services 2005 Product of the Year Award. New Edge Networks is listed No. 28 on the 2004 Inc. 500 list of fastest growing companies in America. The company's Web site is www.newedgenetworks.com. Telephone: 1-360-693-9009.
